Structure

I-FEEL™ is based on a specific hardware architecture which introduces innovative technologies. The configuration and installation layout result in a lighter system with reduced maintenance costs. I-FEEL™ can be easily extended and reconfigured according to the customer requests. I-FEEL™ wireless touch panels are customized to be the ultimate interface between hardware, passenger and aircraft.

Enjoy Your Flight

I-FEEL™ (In-Flight Entertainment Enhanced Lounge) is a highly advanced, customer-centric entertainment and cabin management system. I-FEEL™ consists of audio, video, moving map, camera and cabin comfort functions by touchscreens strategically located throughout your interior or by connectivity to any smart device. I-FEEL™ can control your aircraft's intercom system and headset isolation; allowing for secure and private conversation, via handset or wireless headset. Fly with confidence and confidentiality, all from your fingertips.

Mobile server and APP

The I-FEEL™ system interfaces with all personal devices via the customized APP, resulting in complete management of cabin functionalities and the entertainment system. I-FEEL™ mobile is a simple, user friendly web-based browser for your aircraft. It allows any device to display multimedia content stored on the dedicated server and control cabin functionalities without waiting for an app to download. I-FEEL™ mobile takes full advantage of the most current web-designs and can be quickly altered for a fresh new style or mood.

Connect and Control

We live in a world of ever-changing technologies. I-FEEL™ will keep pace with tomorrow's smart-devices. I-FEEL™ can pair with any smart-device, phone, tablet and even your AndroidWear Smartwatch. Passengers and operators won't lose time searching for the aircraft dedicated remote control or waiting for a new device to pair. Pairing is as simultaneous as walking onboard and taking your seat.
