VVIP Interior

Award winning MAG Design Studio has created the next generation in VIP helicopter interiors for the Bell 525. Clients will have the ability to transform their Bell 525 into a flying boardroom or a luxurious flying limousine. A variety of configurations are available, including an unlimited array of color combinations and moods. Cabinetry, consoles and seat options are customizable to fit your profile.

Envy Your Flight

Behind the Italian style is a wide range of advanced technology that will make your business jet envious. The Bell 525 is equipped with MAG's own noise abatement system (SILENS) and MAG's In-Flight Entertainment and CMS lounge (IFEEL). Enjoy electro-chromic dimmable windows, audio, videos, moving maps, privacy window and mood lighting, all from the touch of your smart device - even your smart watch.

Enjoy other amenities such as soft touch activated reading lights, or state of the art cabin speakers where style and function are combined in a perforated pattern that replicates sound-wave propagation.

Designed Around You, For You

Equipped with Near-Field Communication (NFC). NFC recognizes your position in the helicopter if your smart device is placed near the sensors in the passenger seats. It will automatically register you on the IFE system, simultaneously connecting you to IFE and Wi-Fi.
